

Native PSA – 60 seconds

April is STD Awareness Month—a time to raise awareness about the impact of STDs on our lives.

Did you know that *half* of all sexually active young people in the US will get an STD by the time they are 25? And for us, it may even be more than that, because Native youth have the *second highest* STD rates in the country.

The good news is that STDs can be prevented and are easy to treat. Many people who have an STD don't know it because they often don't have signs or symptoms. If left untreated, STDs can lead to serious health problems. The only way to know for sure whether you have an STD is to get tested.

There are things we can do to protect ourselves and our loved ones from STDs. So GYT—Get Yourself Tested. Visit GYTNOW.org to find an STD testing location near you.
